Beeswax Candles

All of our candles are made from 100% pure beeswax with cotton wicks. None of our candles have any added scent but emit the natural fragrance of beeswax.

Beeswax candles burn longer, cleaner and brighter than paraffin.

We make all of our beeswax candles by hand, here on our farm!

Beeswax is a renewable all natural wax with no additives or fillers, created solely by Honeybees. It is safe enough to eat, common in many cosmetics, and is most recognizable as a clean burning & bright fuel source in beeswax candles. Beeswax is hypo-allergenic and good for people with allergies, asthma or other chemical

How to burn a beeswax candle

To prolong the life of your beeswax candle keep the wick at 1/4 inch in height, trimming with scissors if necessary. As the candle melts push the soft walls of the candle inwards, keeping the melted wax from dripping over.

Burn times of each candle are approximates. Candles burned intermittently will last longer than one burned continuously. Temperatures of the environment will also effect the burn time of each candle.

Reasons To Switch To Beeswax Candles

- Clean air
- Draw in contaminants: Neutralize pollutants
- Produce calming and balancing vibrations
- Rich, Honey scent
- Burn longer, Virtually dripless.
- Natural Color Frosted

Do not leave burning candles unattended!

Keep wicks trimmed to 1/4 inch

Burn in fireproof container

Keep out of reach of children
